

MAGNETIC FILTER BAR (THIN-WALLED)(WATERPROOF) 19 X 200 / 2 X M5IN / N

PERFORMANCE PARAMETERS

| | |
|---|---|
| Manufacturer | Enes Magnesy |
| Country of origin | Poland |
| Customs code CN | 85059029 |
| External diameter | 19 [mm] |
| Length | 200 [mm] |
| * Magnetic section length | 163 [mm] |
| Thread type | internal, M5 |
| Thread length | 5 [mm] |
| Magnet type | neodymium, N45 |
| Magnetic properties of N45 material: remanence induction (Br) 1,32-1,38 [T], 13200-13800 [Gs] | |
| Maximum magnetic field over the middle poles | 0,83 [T] (8300 [Gs]) +/- 5% |
| Magnetic induction is measured with a teslameter with a hall effect flat probe. | |
| Maximum working temperature | ≤ 80 °[C] |
| Housing | stainless steel, AISI 304 / EN 1.4301, approved for contact with food |
| Waterproof | class IP67 |
| Range | max. 20 [mm] |
| Weight | 340 [g] |
| Casing pipe wall thickness | 0,5 |

25x4x2/N38 - Neodymium magnet

This is a long block magnet. It is rectangular in shape.

It is a neodymium magnet, magnetised along the height. It has two poles, which means it is double-sided. It has been protected against corrosion by nickel plating. It has been manufactured according to excellent dimensional tolerances. The maximum operating temperature is no more than 80 degrees Celsius. Neodymium magnets stick to metal surface. You can attach magnet to surfaces made of ferromagnetic materials. This magnet is strong for its dimensions.
